

SZYMON ROJEK

Software Test Engineer | Data Migration, SQL, API Testing & Test Automation

Hove, East Sussex • sz.rojek@gmail.com

Portfolio szymonrojek.github.io/homepage • **LinkedIn** linkedin.com/in/szymonrojek

OPEN TO QA & TEST AUTOMATION ROLES • WILLING TO RELOCATE

PROFILE

Software Test Engineer with four years' experience testing financial and shareholder data migrations at Equiniti. I turn mapping documents and transformation rules into traceable test cases, reconcile source and target data with complex T-SQL, and trace defects back to their real cause. Alongside this I build and test front-end projects with Playwright, TypeScript, Cypress and Postman, run in CI with GitHub Actions. I also pilot in-house AI agents that write tests from user stories, reviewing their output for gaps with the engineers who build them.

CORE SKILLS

DATA MIGRATION

Mapping and transformation rule validation, conversion and deconversion, trial migrations and cutover, source-to-target reconciliation, extract and report validation

TESTING

Requirements analysis and traceability, functional, integration and regression testing, test data preparation, defect lifecycle, root-cause analysis, Agile

AUTOMATION & CODE

Playwright, TypeScript, Cypress, TestCafe, Gherkin/Cucumber, Jest, Vitest, React Testing Library, axe, JavaScript, React, HTML, CSS

SQL

Complex T-SQL, multi-table joins, data quality checks, test data creation, Stored Procedure analysis (SQL Server)

API TESTING

REST APIs, Postman collections and Collection Runner, auth and status validation

TOOLS

Azure DevOps, SSMS, Postman, Git, GitHub Actions, VS Code, GitHub Copilot, Claude

EXPERIENCE

Software Test Engineer

Sep 2022 – Present

Equiniti, Worthing | Financial services and shareholder registry

Data migration and SQL testing

- Translate requirements, mapping documents, transformation rules and database schemas into traceable test scenarios and executable scripts.
- Validate financial and shareholder data across migration, conversion and deconversion projects, including trial migrations and cutover, comparing databases, extracts, output files and reconciliation reports.
- Write complex T-SQL and multi-table joins to run source-to-target reconciliation and data quality checks (nulls, duplicates, referential integrity), produce evidence and build test data.
- Analyse Stored Procedures and processing logic to show whether a defect sits in source data, transformation, application logic or the requirements themselves.

Quality process

- Estimate effort and design positive and negative test cases, peer-reviewed before execution.
- Log, track and retest defects in Azure DevOps with clear reproduction steps and evidence.
- Work with developers, solution designers, architects and senior stakeholders in an Agile team to reproduce issues and verify fixes.

AI-assisted testing

- Pilot user of in-house multi-agent AI tooling that writes tests from user stories (PBIs) and mapping documents; I find gaps in its output and review them with the senior engineers who build it.
- Write agentic testing procedures for the test team with clear objectives, boundaries, validation steps and human oversight.
- Use GitHub Copilot agents for code analysis, technical investigation, SQL and repetitive testing tasks.

SELECTED TESTING PROJECTS

Personal portfolio, tested like a production app

Playwright · TypeScript · Vitest · axe · GitHub Actions

React and TypeScript site with Vitest unit and component tests behind a coverage gate, Playwright end-to-end tests on desktop and mobile, and axe accessibility scans. GitHub Actions blocks every deploy until all checks pass.

github.com/SzymonRojek/homepage

Ferry booking end-to-end suite

TestCafe · Gherkin · Cucumber

BDD end-to-end suite for a ferry booking site, covering the UK, German and Italian versions.

github.com/SzymonRojek/df-automation-tests

Email campaign API tests

Postman · REST · Express

CRUD app on the Airtable REST API behind an Express proxy that keeps the API key out of the browser. Every endpoint is covered by Postman tests for valid, invalid, authorised and unauthorised requests, automated with the Collection Runner.

CERTIFICATION & EDUCATION

ISTQB Certified Tester Foundation Level (CTFL)

In progress

Microsoft AI courses: generative AI, Copilot, responsible AI

2026

Artificial Intelligence course, John Paul II Catholic University of Lublin

2025

Master of Theology, First Class Honours, Nicolaus Copernicus University, Toruń

2012

LANGUAGES & INTERESTS

Polish: Native

English: Professional working proficiency

Interests: Classical guitar (built my own music site), swimming, cycling
